Automatic Zoom

```
else if(this.lr) {
    root.left = rotateLeft(root.left);
    root.left.parent = root;
    root = rotateRight(root);
    root.colour = 'B';
    root.right.colour = 'R';
    this.lr = false;
}

// when rotation and recolouring is done flags are reset.
// Now lets take care of RED RED conflict
if(f) {
    // to check which child is the current node of its parent
    if(root.parent.right == root) {
        // case when parent's sibling is black
        if(root.parent.left==null || root.parent.left.colour=='B') {
perform certaing rotation and recolouring. This will be done while backtracking.
Hence setting up respective flags.

            if(root.left!=null && root.left.colour=='R')
                this.rl = true;
            else if(root.right!=null && root.right.colour=='R')
                this.ll = true;
        }
        // case when parent's sibling is red
    else {
        root.parent.left.colour = 'B';
        root.colour = 'B';
        if(root.parent!=this.root)
            root.parent.colour = 'R';
    }
}
```
