Question 1 :

Bottom View of a Binary Tree

The top view of a binary tree is the set of nodes visible when the tree is viewed from the top. Given a binary tree, print the top view of it. The output nodes can be printed in any order.

Sample Input :

```
      20
     /  \
    8    22
   /  \  \
  5   3  25
   /  \
  10  14
```

Sample Output : 5 10 3 14 25**Hint :** Use the concept of Vertical Order

Question 2 :

Two Sum

Given an array of integers `arr[ ]` and an integer `target`, return indices of the two numbers such that they add up to `target`.

You may assume that each input would have exactly one solution, and you may not use the same element twice.

You can return the answer in any order.

Sample Input 1 : `arr = [2, 7, 11, 15], target = 9`**Sample Output 1 :** `[0, 1]`

As `arr[0] + arr[1] == 9`, we return `[0, 1]`.

Sample Input 2 : `arr = [3,2,4], target = 6`**Sample Output 2 :** `[1, 2]`

Question 3 :

Sort by Frequency
